# 12.OfType

### LINQ OfType 简介:

根据指定类型筛选 IEnumerable 的元素。

### LINQ OfType 代码示例:

\* http://sikiedu.com liangxie

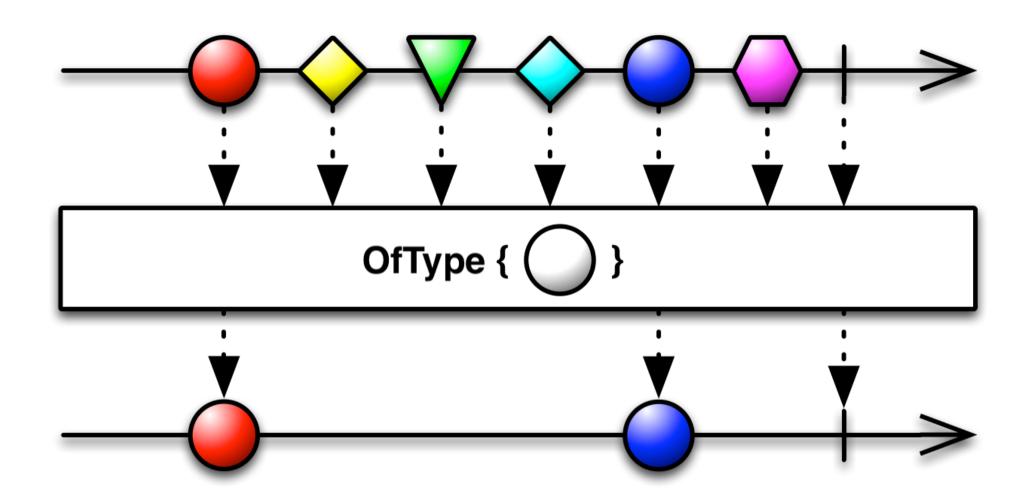

```
using System.Collections;
using System.Linq;
using UnityEngine;
namespace UniRxLesson
      public class LINQOfTypeExample : MonoBehaviour
            private void Start()
                  var list = new ArrayList {30, 30.0f, "test"};
                  var filterList = list.OfType<float>();
                  foreach (var obj in filterList)
                        Debug.Log(obj);
```

}

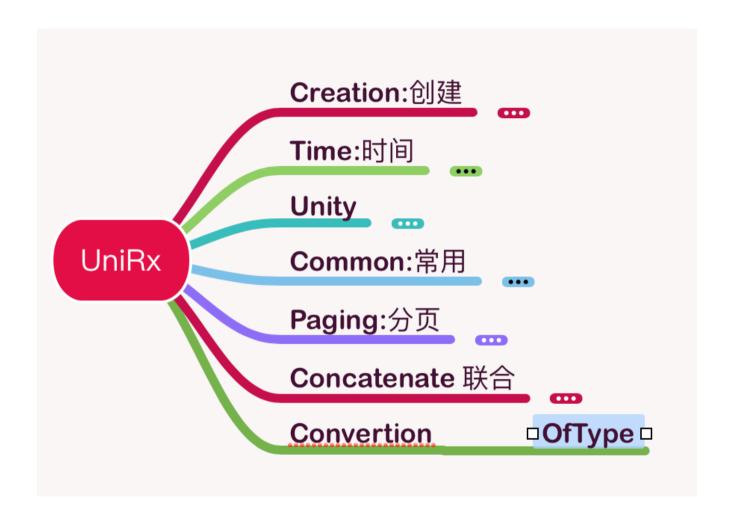

#### 输出结果为:

30

## UniRx OfType 示意图

## UniRx OfType 在知识地图中的位置

## UniRx OfType 示例代码

```
* http://sikiedu.com liangxie
using UniRx;
using UnityEngine;
namespace UniRxLesson
    public class UniRxOfTypeExample : MonoBehaviour
        private void Start()
             // 创建一个 Subject(Observable)
             var objects = new Subject<object>();
```

```
// 订阅该 Observable,进行类型过滤
objects.OfType<object, string>()
     .Subscribe(Debug.Log);
// 手动发送数据
objects.OnNext(1);
objects.OnNext(2);
objects.OnNext("3");
objects.OnNext(4);
// 手动结束
objects.OnCompleted();
```

输出结果为:

今天内容就这些。
